Make Maths Real!

A London South West Maths Hub Event

Financial and practical numeracy ideas for Maths lessons

Why?

There is a shortage of numerate employees in the UK. Worse than that, employers are finding a significant disconnect between grades at all levels and the practical useful deployment of the supposed equivalent skills & techniques. We need to bridge that gap.

- Have you ever been asked by a student "what's the point of this?"
- Do you find pupils disengaged?
- Do you sometimes wonder if you over-focus on exam or test results?
- Are you an advocate for functional numeracy but not sure how to achieve this?

This one off event is definitely for you!

Target audience

Aimed at KS3/KS4 Maths teachers, HoDs and anyone who has responsibility for helping deliver secondary maths education. Relevant and translatable for KS2/KS5 teachers too.

Workshop facilitator

David Kremer

Engineer, Toy Inventor, Business Investment Angel and former Secondary Maths teacher will lead the session.

More information and booking

More information can be found [here](#)

Please book online through [Eventbrite](#) to secure a place at this event.
